Oct. 19, 1990

Dear Mr. Reilly,

I care enough about Planet Earth and the generations following mine to write to you and let you know that I protest irresponsible actions such as Ethyl Corp., is their trying to sneak "Hitec 3000" by the populous and your (EPA) Agency.

PLEASE DENY Ethyl Corp application for "Hitec 3000". After all didn't they do enough damage with Lead poisoning? Sincerely,
Mrs. Louise H. Campbell

by
Alan Hunt

Dear Mr. Peilly:

10/19/10

I am writing to ask you to come and strongly oppose to Eljer Corporation's application for the addition of methylcyclopenta-diene manganese thiobacetyl (MMT) to gasoline. At this late date we cannot afford to add heavy metals like manganese to the environment, unless it can be proven beyond any reasonable doubt that one long-term exposure to them will be harmless. Have they met this burden of proof? If in your heart you feel they haven't, please be true to the facts we have placed in your hands and reject their application. Truly yours, William M. Deasey.

Dear Mr. Reilly,

Lead gasoline additives are now known to have been a major contributing cause of chronic lead poisoning affecting millions of children around the world. Please, you can't let the Ethyl corporation receive the approval for Hi-Tec 3000. It would be a giant step backward for the environment and for our children.

Sincerely! David Koeb,

Dear Sir,

I strongly urge you and your agency not to approve the Ethyl Corp's new gasoline additive Hi-Tec 3000. As you know the product contains manganese - a toxic heavy metal - whose long term effects on the health of Americans could be serious.

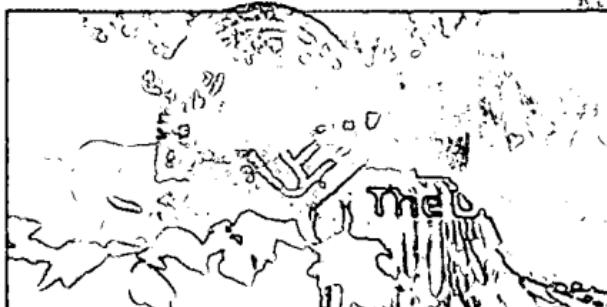

I do not think that the merits of this additive are strong enough to warrant approval. Our suspension with leaded gasoline supports taking a cautious approach when the health of our citizens is at stake. Thank you. Sincerely, Wilmington

Dear Mr. Reilly,

I am writing in support of the fuel additive HITEC 3000 being permitted to be added to gasolines in the United States. I understand that Canada has been using this additive for a number of years with no adverse affects to people or the environment. I also understand that it would save about 82,000 barrels of imported crude oil a day which in view of the current crises in the Middle East is certainly a plus for this country. Also, HITEC 3000 additive can reduce significantly automobile emissions. We need to do all that we can to help our ailing environment.

I don't know what position automobile manufacturers or the oil companies have taken on the additive to fuel. But I would hope that if they or any other special interest groups are opposed, that the EPA will not cave into lobbying pressures. Please pass favorably on this additive.

Dear Sir,

10/23/90

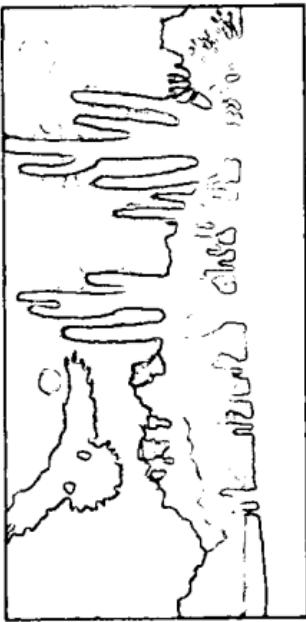

As a concerned member of the Environmental Defense Fund, I urge you to reject Esso's Corporation's application to use this gasoline additive MMT. It may pose as a significant health hazard. Further research is needed.

Dear Mr. Reilly,

(11)

It may take several generations to get rid of the toxic effects of leaded gasoline, but we can be free from the damage. If I strongly urge you to require a study by impartial scientists of the best universities before permitting the Ethyl Corporation or any group to add manganese (Chi-Tec 3000) to our motor fuels. Your charge is to help preserve our environment & health.

Dear Mr. Reilly,

We have made great progress in cleaning up our polluted air. The addition of the gas additive "M on T" would be a tremendous step backwards in our efforts to improve the air that all of us breath. Therefore, I ask that Remond E. Thys Corporation's application to make this gas additive available for general use.

Sincerely, Karl Krause

Dear Mr. Neilly,

I write to urge you to accept Ethyl Corporation's application for "Hi Tech 3000", a manganese-based gasoline additive.

Thank you.

Sincerely

Dear Mr. Reilly,

I am concerned with possible toxic effects of Hi-Tec 3000 and urge that the Ethyl Corp.'s application not be approved until Hi-Tec 3000's safety can be assured.

Sincerely,

GOLDSTEIN

Dear Administrator Peiley,

As a concerned citizen,
environmentalist and active
member of the Environmental
Defense Fund, I strongly urge
you to deny Ethyl Corporation's
application for the Tec 3000
a toxic manganese-based gas-
oline additive. Let us learn from
our past mistakes.
